

## The 10.3 Rio Feature Matrix in this document has been updated for release 10.3.2.

Each feature in the following table has an indication if it is available in Delphi and/or C++Builder. RAD Studio editions include both languages. Each column covers multiple, similar editions, with any difference specifically called out. Community edition is available only for single personalities and has a limited license. Some of the features are only available for download from the IDE in the Getlt Package Manager, requiring an Internet connection.
