ID: 30870, December 2018 IDE Patch for 10.3

by **Calvin Tang** Email: Anonymous

December 2018 IDE Patch for 10.3
This patch fixes a few issues related with the RAD Studio IDE in 10.3, including problems building an UWP app for the
Windows Store, missing application configuration options in C++Builder, the lack of DBExpress Enterprise drivers in
Data Explorer and an incorrect configuration for the Android NDK.

Available only to registered users of Delphi, C++Builder, RAD Studio 10.3, and Embarcadero All-Access XE

English, French, German and Japanese

MD5: 1EE980A2C5ABA912E8D08590433C3512

DESCRIPTION

December 2018 IDE Patch for 10.3
This patch fixes a few issues related with the RAD Studio IDE in 10.3, including problems building an UWP app for the Windows Store, missing application configuration options in C++Builder, the lack of DBExpress Enterprise drivers in Data Explorer and an incorrect configuration for the Android NDK.

The patch addresses the following issues reported on Quality Portal, and other related, reproducible issues logged internally by the support and QA teams:

- RSP-22123: Deploying an App to the Windows Store fails
- RSP-21683: Rio 10.3 IDE missing Application sub options [for C++Builder]
- RSP-21791: IBTogo November 2018 fails on linker
- RSP-22268: Android IBLite Linker Error
- RSP-22081: Android FireIBLite no working

Available only to registered users of Delphi, C++Builder, RAD Studio 10.3, and Embarcadero All-Access XE
English, French, German and Japanese
